

The Real Estate Lead Leakage Checklist

Are your marketing leads actually turning into site visits?

A 10-minute self-assessment for real estate agencies and channel partners

You may be generating leads every day from Meta, Google, property portals, your website and WhatsApp. The more important question is what happens after the lead comes in.

A low cost per lead does not always mean successful marketing. If leads are not contacted quickly, qualified properly, matched with the right project and followed up consistently, increasing your ad budget simply increases the leakage.

USE THIS CHECKLIST TO ASSESS YOUR JOURNEY FROM

Total Leads → Contactable → Relevant → Qualified → Site Visit → Booking

HOW TO COMPLETE THIS CHECKLIST

Tick YES only when the process is consistently followed and you can verify it with data.

If something happens occasionally, or depends on an individual salesperson remembering to do it, count it as a NO.

1 Marketing Attribution

Do you know where your leads actually come from?

- ☐ 1. Every lead automatically records its source: Meta, Google Ads, Housing.com, 99acres, Magicbricks, website, WhatsApp, referral or walk-in.
- ☐ 2. For paid campaigns, we can identify the campaign that generated each lead.
- ☐ 3. For Meta and Google leads, we can identify the specific ad, creative, keyword or campaign responsible where applicable.
- ☐ 4. Our sales team can see the lead's marketing source before or while contacting the prospect.
- ☐ 5. **HIGH IMPACT** We can compare campaigns based on qualified leads and site visits, rather than relying only on cost per lead.

ASK YOURSELF

Which campaign generated the highest number of completed site visits last month?

If answering this requires manually matching multiple reports, you have an attribution gap.

2 Lead Quality

Do you know the real quality of the leads you are paying for?

- ☐ 6. We distinguish between total leads and contactable leads.

- ☐ 7. We consistently record junk and invalid leads, including wrong numbers, wrong locations and people who never submitted an enquiry.
- ☐ 8. We identify leads whose budget, property type or requirement does not match what we are selling.
- ☐ 9. We distinguish genuine buyers from brokers, rental enquiries and other non-target leads.
- ☐ 10. **HIGH IMPACT** Our marketing reports show the full funnel beyond cost per lead.

WHY THIS MATTERS

Consider two campaigns. Campaign A at Rs 600 cost per lead, Campaign B at Rs 1,000 cost per lead.

Campaign A looks better at first. But if Campaign B produces more qualified buyers and completed site visits, it may be the more profitable campaign.

Lead cost without lead quality can be misleading.

3 First Response & Sales Accountability

What happens in the first few minutes after an enquiry arrives?

- ☐ 11. **HIGH IMPACT** Every new lead is automatically assigned to a salesperson or pre-sales executive.
- ☐ 12. We measure the time between lead generation and the team's first contact attempt.
- ☐ 13. We have a defined first-call SLA for new enquiries.
- ☐ 14. The number of call attempts and the outcome of each attempt are recorded.
- ☐ 15. Leads that remain unanswered or unattended are automatically flagged for further action.
- ☐ 16. **HIGH IMPACT** If a salesperson does not act within the agreed timeframe, the lead can be escalated or reassigned.
- ☐ 17. When pre-sales qualifies a lead and hands it to a salesperson, the handoff and ownership are clearly recorded.

QUICK TEST

Pick 10 leads generated yesterday. Can you quickly see, for each one:

Who received it → when they first called → number of attempts → call outcome → current status

If not, management has limited visibility after lead generation.

4 Lead Qualification & Project Matching

Are you qualifying buyers, or simply collecting enquiries?

- ☐ 18. We consistently capture the prospect's approximate budget.
- ☐ 19. We capture property requirement and buying timeline.
- ☐ 20. We know whether a prospect is a serious, qualified buyer before moving them further into the pipeline.

- ☐ 21. **HIGH IMPACT** A lead that does not fit the advertised project is checked against our other suitable projects before being marked lost.
- ☐ 22. Our team can easily identify alternative projects based on the buyer's budget, location and requirement.

EXAMPLE

A prospect enquires for a Rs 3.5 Cr property but later reveals a Rs 2.5 Cr budget. That does not necessarily make them a bad lead.

If you have another relevant project within their budget and preferred location, the lead may still be a genuine opportunity.

The goal is not just lead-to-project tracking. It is lead-to-right-project matching.

5 Follow-Up & Lead Recovery

What happens when a qualified prospect does not convert immediately?

- ☐ 23. **HIGH IMPACT** Every active lead has a clearly defined next follow-up date or action.
- ☐ 24. Salespeople can immediately see which follow-ups are due or overdue.
- ☐ 25. Prospects who do not answer the first few calls enter a structured follow-up process instead of being forgotten.
- ☐ 26. WhatsApp, calls and other communication are used systematically during follow-up, not left to individual habit.
- ☐ 27. Older qualified leads can be reactivated when a relevant project, offer or price change becomes available.

ASK YOUR TEAM

How many qualified leads from the last 90 days currently have no next follow-up scheduled?

Those leads represent potential pipeline leakage.

6 Site Visit Management

Can you measure the journey from qualified lead to actual site visit?

- ☐ 28. **HIGH IMPACT** Site visits are tracked through clear stages: scheduled, confirmed, completed, no-show, rescheduled, revisit, negotiation, booking.
- ☐ 29. The salesperson or manager can see upcoming site visits and their current status.
- ☐ 30. No-shows and cancelled visits have a defined follow-up or rescheduling process.
- ☐ 31. Completed site visits have a recorded outcome and next action.
- ☐ 32. **HIGH IMPACT** Every completed site visit can be traced back to its original marketing source or campaign.

THE KEY MARKETING QUESTION

Instead of asking only what your cost per lead was, your team should be able to ask:

What did it cost us to generate a completed site visit?

7 Management & Revenue Visibility

Can management see performance without chasing the team for updates?

- ☐ **33.** Management can see leads by source, salesperson and pipeline stage from one reporting system.
- ☐ **34.** We can see conversion rates across lead, qualified lead, site visit and booking.
- ☐ **35.** **HIGH IMPACT** We can identify which campaigns contribute to qualified leads, site visits and bookings, not just form submissions.

Calculate Your Lead Leakage Score

Count the number of questions where you answered NO.

Score	What it means
0 to 7 NOs	Funnel under control You have a strong lead-management foundation. Your next opportunity is improving campaign efficiency, conversion rates and deeper attribution.
8 to 14 NOs	Revenue leakage likely Your marketing may be generating demand, but gaps between marketing, pre-sales and sales are likely losing opportunities. Fix the sections with the most NOs first.
15 to 21 NOs	Significant funnel leakage There are meaningful gaps in attribution, lead handling, qualification, follow-up or site-visit management. Increasing ad spend before fixing these may simply generate more leakage.
22+ NOs	Fix the funnel before scaling Your business is likely relying on individual salespeople, manual reporting and disconnected systems. Establish visibility and accountability before aggressively scaling Meta or Google spend.

The 5-Minute Reality Test

Pick one booking or completed site visit from the last 30 days, and trace it backwards through the full chain:

Booking → Negotiation / Revisit → Completed Site Visit → Qualification
Sales Follow-Up → First Contact → Original Enquiry → Lead Source → Campaign / Ad

YES, you could trace it in a few minutes: your tracking infrastructure is in good shape.

NO: note exactly where the trail disappeared. That is one of the first places to investigate.

One More Set of Numbers Worth Calculating

If you are investing Rs 3 to 5 lakh per month in marketing, do not evaluate performance using cost per lead alone. Track these four numbers instead:

1. Cost per lead	Marketing spend / total leads
2. Cost per qualified lead	Marketing spend / qualified leads
3. Cost per completed site visit	Marketing spend / completed site visits
4. Cost per booking	Marketing spend / bookings

These numbers tell a far more useful story about marketing performance than lead volume alone.

Want a Second Opinion?

You do not need to change your CRM or marketing setup to use this checklist. Run the assessment with your team first, then send us three things:

- ☐ Your total number of NOs
- ☐ The sections where you scored the most NOs
- ☐ Your current monthly marketing spend

We will identify the three biggest potential leaks in your lead-to-site-visit funnel and tell you what we would investigate first. No obligation to change your existing setup.
